Our love of detail brings together the most diverse components – for maximum efficiency.

Efficient warehouse systems consist of many components that must harmonise per possible through customised systems because every sector, every company, every own particular needs. And hence special requirements to be fulfilled by a warehouse. Individual solutions in warehouse and order-picking engineering are the strengths of Dambach Lagersysteme. Innovative ideas and the very latest technology in the areas of rail-guided stacker cranes, industrial trucks, stacker crane controls and modernisation form the foundation and implementing tailored warehousing concepts. Perfectly coordinated and optimized the system components and subsystems of the system suppliers.
